## PROFESSIONAL SUMMARY

Computer Science and Engineering graduate with skills in full stack development, along with data science and machine learning. Experienced in building scalable web and mobile applications and integrating data-driven models. Focused on applying AI and modern technologies to solve real-world problems.

## EDUCATION

|                                                                    |               |                    |
|--------------------------------------------------------------------|---------------|--------------------|
| <b>Bachelor of Engineering</b> in Computer Science and Engineering | CGPA: 8.54/10 | <b>2023 – 2026</b> |
| Prof. Ram Meghe College of Engineering and Management, Badnera     |               | Amravati, India    |
| <b>Diploma in</b> Computer Engineering                             | Score: 77.14% | <b>2021 – 2023</b> |
| Government Polytechnic Arvi                                        |               | Arvi, India        |
| <b>Higher Secondary School - HSC</b>                               | Score: 80.67% | <b>2020 – 2021</b> |
| Municipal Jr. College of Science, Arvi                             |               | Arvi, India        |

## SKILLS

**Technical:** Java, Python, Flutter, FastAPI, REST API, HTML, CSS, JavaScript, SQL, MongoDB

**Tools:** Git, GitHub, Streamlit

**Core Areas:** Full Stack Development, Data Science, Machine Learning, AI/LLMs

|                                                                                                                                                                                                                                                                                                                                                                            |                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| <b>XAI-Powered Sports Analytics Suite</b>                                                                                                                                                                                                                                                                                                                                  | <b>Sep 2025 – May 2026</b> |
| <ul style="list-style-type: none"><li>Developed ML models using Python (Scikit-learn) on a dataset of 1,200+ players for performance, injury risk, and match prediction with SHAP &amp; LIME explainability.</li><li>Built an interactive dashboard enabling coaches to analyze player performance and predict match outcomes using explainable AI (SHAP, LIME).</li></ul> |                            |
| <b>Customer Segmentation using K-Means Clustering</b>                                                                                                                                                                                                                                                                                                                      | <b>Nov 2024 – Jan 2025</b> |
| <ul style="list-style-type: none"><li>Applied K-Means clustering to segment customers into distinct behavioral groups, enabling targeted marketing strategies.</li><li>Performed data cleaning, feature selection, and visualization to generate meaningful segments.</li></ul>                                                                                            |                            |
| <b>Hotel Management and Restaurant Booking System</b>                                                                                                                                                                                                                                                                                                                      | <b>Nov 2022 – Jan 2023</b> |
| <ul style="list-style-type: none"><li>Built a booking system for managing hotel rooms, restaurant tables, users, and reservations.</li><li>Implemented backend features for availability tracking, booking flow, and secure data handling.</li></ul>                                                                                                                       |                            |

## EXPERIENCE

|                                                                                                                                                 |                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>Full Stack Developer - Let's Conceive, Amravati</b>                                                                                          | <b>Dec 2025 – Present</b> |
| <ul style="list-style-type: none"><li>Building and maintaining web and mobile applications, contributing to CRM and automation tasks.</li></ul> |                           |

## CERTIFICATION

- Google Cloud Generative AI Leader Track - Cloud Career Launchpad
- Deloitte Data Analytics Virtual Job Simulation
- Kaggle 5-Day GenAI Intensive Badge
- Scaler DBMS Course - Core & Advanced Database Concepts
- Java Full Stack Developer Virtual Internship (10 Weeks) - Edu Skills
- AI-ML Virtual Internship (10 Weeks) - Google Developers & Edu Skills
- LeetCode "Active 365 Days" Badge - 2025
